ATI Co-op Program

ATI Industrial Automation is offering a career-related program in the field of Robotic End-Effectors – where students commit to work for multiple semesters in a paid work experience. Mechanical, Electrical, Computer Engineering, as well as Computer Science majors are most desirable, but other majors are desired as well. The program is designed for local and out of town/state students and will provide free housing for out of town/state students.

Positions are career relevant with progressive responsibilities over semesters employed.

Schedules shall include parallel (student works part-time and goes to school part time), alternating (student alternates full-time semesters of work with full-time semesters of school), and back-to-back (student may work consecutive semesters if summer is included).

In order to be considered for our co-op program, students must submit a resume and unofficial transcript reflecting a 3.5+ GPA with a major in Bachelor of Science in Mechanical or Electrical Engineering. If you are applying for non-engineering positions a GPA of 3.0 is required.

To apply for our co-op positions please visit www.Novanta.com/Careers, then filter for Apex, NC.
